# BROADRICK SECONDARY SCHOOL SECONDARY 4 EXPRESS PRELIMINARY EXAMINATION 2019

BIOLOGY 6093/01

Paper 1 Multiple Choice

Sep 2019

Additional Materials: Multiple Choice Answer Sheet

1 hour

#### **READ THESE INSTRUCTIONS FIRST**

Write in soft pencil.

Do not use staples, paper clips, glue or correction fluid

Write your name, index number and class on the OTAS answer sheet.

There are **forty** questions in this paper. Answer all questions. For each question, there are four possible answers, **A**, **B**, **C** and **D**.

Choose the **one** you consider correct and record your choice in **soft pencil** on the separate OTAS answer sheet.

Each correct answer will score one mark. A mark will not be deducted for a wrong answer.

Any rough working should be done in this booklet.

The use of an approved scientific calculator is expected, where appropriate.

This question paper consists of 20 printed pages including this page.

- 1. Which of the following is found in all living cells?
  - A centrioles and nucleus
  - B chloroplast and protoplasm
  - C golgi apparatus and cell membrane
  - D vacuole and cell wall
- The diagram below shows a general animal cell.
  Which of the structures would be involved in the final secretion of digestive enzymes from this cell?

3. A few leaves of purple cabbage were placed in a beaker of water for 10 minutes. The water remained colourless after the 10 minutes.

The beaker was then heated to 100°C for 5 minutes. After boiling, the water turned purple.

Which of the following best explains this observation?

- A The pigments gained more kinetic energy upon heating and were able to diffuse out of the leaves quickly, hence the coloured water in just 5 minutes.
- **B** The cell walls were denatured upon heating, allowing the pigment to diffuse into the water.
- C During the boiling, the cell membranes were damaged, hence allowing the pigment to diffuse into the water.
- **D** Heating increases the solubility of the pigment, thus colouring the water purple.

6093/1/9/19

4. Which of these processes require energy from respiration?

|   | Diffusion | Osmosis  |
|---|-----------|----------|
| Α | ✓         | <b>*</b> |
| В | ✓         | ×        |
| С | ×         |          |
| D | ×         | ×        |

Key: ✓ energy required × energy not required

5. An experiment was carried out to investigate the digestion of starch using amylase at two different temperatures, 10°C and 40°C. A sample is taken every 15 seconds and placed into each well as shown below.

Each well contains 2 drops of iodine solution and 15 samples were taken from each temperature condition.

The results are shown below.

Which of the following shows the correct temperatures and times for the complete digestion of starch?

|   | Temperature / ºC | time/s |
|---|------------------|--------|
|   | 10               | 60     |
| A | 40               | 210    |
| 5 | 10               | 210    |
| В | 40               | 60     |
| _ | 40               | 45     |
| C | 10               | 195    |
|   | 40               | 195    |
| D | 10               | 45     |

6093/1/19

**6.** The graph shows changing energy levels during a reaction, with and without the presence of the enzyme specific to this reaction.

What is the activation energy of the reaction without the presence of the enzyme?

7. Which graph represents the activity of amylase in starch digestion?

6093/1/9/19

**8.** The diagrams show a villus from the small intestine and an enlarged view of a cell from region P.

#### Which statement is correct?

- A Amino acids are absorbed through the microvilli and used by the cell for aerobic respiration.
- **B** Fats diffuse into P and enter Q to be distributed.
- C Mitochondria releases energy for the active transport of proteins into R.
- **D** Microvilli increases surface area to volume ratio of P for the absorption of glucose into R.
- 9. A photosynthetic plant was given the radioactive isotope of oxygen, O¹8. Where would this isotope be eventually located?
  - A the starch grains in the mesophyll cells
  - **B** the oxygen gas given out by photosynthesis
  - C the carbon dioxide formed in respiration
  - **D** the glucose made from photosynthesis

6093/1/19

10. The graph below shows how the rate of photosynthesis in a plant varies with light intensity at two different carbon dioxide concentrations. The temperature is kept constant at 20°C.

At which light intensity is light **not** a limiting factor at both 0.04% and 1% carbon dioxide concentration?

**11.** The diagram below shows the pathway of water movement from the soil into the root of a plant.

Osmosis occurs in \_\_\_\_\_

- A (1) and (2) only
- B (1), (2) and (3) only
- C (2), (3) and (4) only
- **D** (1), (2), (3) and (4)

6093/1/9/19

**12.** The diagram below shows an experiment set-up to measure the rate of transpiration of a shoot.

There were several mistakes in the above experimental set-up. Which of the following are the corrections that have to be made?

- I The bottle should be completely filled with water.
- II A tap funnel should be used instead of a thistle funnel.
- III The end of the shoot should be completely immersed in water.
- IV Dilute hydrogencarbonate solution should be used instead of tap water to provide a source of carbon dioxide to the shoot.
- A l and III
- B II and III
- C I, II and IV
- D II, III, IV

6093/1/19

**13.** The graph below shows the pressure changes in the left side of the heart during a single heartbeat.

At which point A to D, is the atrioventricular/bicuspid valve pushed close?

- **14.** A certain genetic disease results in the inability to produce prothrombin. Which symptoms will the patients suffering from this disease most likely have?
  - A aching muscles and insomnia
  - B fatigue and breathlessness
  - C headaches and chronic diarrhoea
  - D nosebleeds and blood in urine
- Which reaction is catalyzed by carbonic anhydrase when red blood cells pass through the lungs?
  - A  $CO_2 + H_2O \rightarrow H_2CO_3$
  - B HCO<sub>3</sub><sup>-</sup> + H<sup>+</sup> → H<sub>2</sub>CO<sub>3</sub>
  - C  $H_2CO_3 \rightarrow CO_2 + H_2O$
  - D H<sub>2</sub>CO<sub>3</sub> → HCO<sub>3</sub><sup>-</sup> + H<sup>+</sup>

6093/1/9/19

- 16. Some effects of tobacco smoking are listed below.
  - 1 Bronchitis
  - 2 Uncontrolled division in some cells
  - 3 Increase in alertness
  - 4 Increase in heart rate
  - 5 Increase in mucus production
  - 6 Increase in blood pressure

Which effects are caused by nicotine and tar respectively?

|   | nicotine   | tar        |
|---|------------|------------|
| Α | 1, 2 and 5 | 4 and 6    |
| В | 3 and 6    | 1 and 5    |
| C | 3, 4 and 6 | 1, 2 and 5 |
| D | 1, 2 and 4 | 3, 5 and 6 |

17. The diagram refers to the control of water potential in blood.
Which statement best explains why this is a negative feedback system?

- A It decreases the amount of water in blood.
- **B** It increases any change in the amount of water in blood.
- C It increases the amount of water in blood.
- **D** It reverses any change in the amount of water in blood.

6093/1/19

**18.** The diagrams show vertical sections of kidneys of coypu, brown rat and kangaroo rat, showing the relative sizes of cortex and medulla.

Coypu are found in fresh water and are never short of water to drink. Brown rats are able to go some days without drinking. Kangaroo rats are able to live in deserts without drinking at all.

Which kidney 1, 2 or 3 is suitable for coypu, brown rats and kangaroo rats in order for them to adapt to their living environment?

|   | 1            | 2            | 3            |
|---|--------------|--------------|--------------|
| Α | brown rat    | coypu        | kangaroo rat |
| В | brown rat    | kangaroo rat | coypu        |
| С | kangaroo rat | brown rat    | coypu        |
| D | kangaroo rat | coypu        | brown rat    |

19. Which factors are controlled by homeostasis?

|   | Temperature in the stomach | pH in the<br>duodenum | Glucose<br>concentration in<br>blood | Water content in the ileum |
|---|----------------------------|-----------------------|--------------------------------------|----------------------------|
| Α | <b>√</b>                   | ×                     | <b>√</b>                             | ×                          |
| В | √                          | ×                     | ×                                    | 1                          |
| C | ×                          | - V                   | 7                                    | V                          |
| D | ×                          | ×                     | <b>V</b>                             | ×                          |

6093/1/9/19

20. The diagram below shows a capillary network in the dermis of the skin.

Which one of the following would be the direct result of the relaxation of the muscle labelled X?

- A greater heat loss
- **B** shivering
- C raising of skin hair
- D raising the body temperature

21. The diameter of a person's pupil is measured as the light intensity is varied.

During which time period does the light intensity increase fastest?

6093/1/19

[Turn over

22. The diagram shows a section through the eye.

Which labelled structures are effectors and which are receptors?

|   | effectors | receptors |
|---|-----------|-----------|
| Α | 1         | 4         |
| В | 3         | 2         |
| С | 5         | 3         |
| D | 4         | 1         |

23. The graph shows the number of nerve impulses per second travelling along two sensory neurones from the skin to the brain, labelled as receptors X and Y, at different skin temperatures.

Which of the following statements best illustrates the graph?

- A Receptor X responds most strongly to temperatures above 18°C.
- **B** Receptor Y responds most strongly to temperatures above 38°C.
- C Receptor X and Y respond most strongly outside the range of 26°C to 38°C.
- **D** Receptor X and Y respond most strongly at temperatures between 26°C to 38°C.

6093/1/9/19

24. During an experiment, a student was blindfolded.

The skin on his fingertip, the palm of his hand and his forearm were then touched several times by two pencil points, either one centimeter or two centimetres apart.

During the record of results, there were instances when he inaccurately said he had only been touched by one point.

The table below shows the number of times he accurately said that he had been touched by two points.

| distance between   | % number  | % number of times he felt two pencil points |         |  |
|--------------------|-----------|---|---------|--|
| pencil points / cm | fingertip | palm  | forearm |  |
| 1                  | 100       | 5   | 20      |  |
| 2                  | 100       | 75  | 30      |  |

Which of the following conclusions could be made from the above results?

- A Only a few touch receptors were present in the skin of the palm.
- **B** No touch receptors were present on the skin of the forearm.
- C Touch receptors were the furthest apart in the skin of the forearm.
- **D** Touch receptors were closest together in the skin of the fingertip.

6093/1/19

**25.** The graph below shows changes in a person's blood glucose concentration over a four-hour period.

What causes the changes at X and Y?

|   | Х                 | Y                    |
|---|-------------------|----------------------|
| Α | decreased insulin | Increased adrenaline |
| В | increased insulin | decreased adrenaline |
| С | increased insulin | Increased glucagon   |
| D | increased insulin | Increased adrenaline |

**26.** Dentists inject the drug procaine into gums so that they can drill into teeth without causing pain.

What is the most probable reason for procaine preventing pain?

- A It prevents the brain from interpreting impulses from the teeth.
- **B** It prevents impulses passing along the sensory neurones to the brain.
- C It blocks the synapses between the sensory neurones and motor neurones.
- **D** It makes the tissues of the gums numb.
- 27. Which of the following statements about a hormone is correct?
  - I It is transported in the blood.
  - II It is secreted by an endocrine gland.
  - III It is under both voluntary and involuntary control.
  - A I and II only
  - B II and III only
  - C I and III only
  - D I, II and III

6093/1/9/19

28. The diagram shows the development of a flower into a fruit.

Where does meiosis occur?

- A 5 only
- B 1 and 3 only
- C 2 and 4 only
- D 5 and 6 only
- 29. The diagram shows a vertical section of a tomato fruit.

Which of the following correctly identifies the floral parts from which structures 1, 2 and 3 have developed?

|   | 1       | 2     | 3     |
|---|---------|-------|-------|
| Α | style   | ovary | ovule |
| В | style   | ovule | ovary |
| С | pedicel | ovule | ovary |
| D | pedicel | ovary | ovule |

6093/1/19

**30.** A surgical method of birth control involves cutting some of the tubes through which sperm pass.

At which point does the surgeon make the cuts?

31. The level of estrogen in the blood of a woman changes during a normal menstrual cycle. Which graph shows these changes?

6093/1/9/19

**32.** The diagram below shows the life cycle of an animal. At which stage in the life cycle does mitosis occur?

33. The diagram shows some animal cells undergoing various stages of mitosis.

Which stages of mitosis are occurring in the cells X, Y and Z?

|   | X          | Υ         | Z          |
|---|------------|-----------|------------|
| Α | anaphase   | metaphase | interphase |
| В | interphase | telophase | anaphase   |
| С | metaphase  | anaphase  | prophase   |
| D | prophase   | telophase | anaphase   |

6093/1/19

34. The diagram below represents the nucleus of a body cell from an organism.

Which diagram does **not** represent a possible gamete nucleus produced by the organism?

**35.** A DNA molecule consists of 4000 nucleotides, of which 20% contain the base adenine.

How many of the nucleotides in this DNA molecule will contain guanine?

- A 800
- **B** 1000
- C 1200
- **D** 1600
- **36.** Bacteria are used in genetic engineering. A plasmid is used to transfer the required DNA into the bacterium.

What is the term used to describe the role of plasmid in this technology?

- A recombinant
- **B** transgenic
- C host
- **D** vector
- 37. Huntington's Disease is an inherited condition in humans caused by a dominant allele. A woman's father is heterozygous for the condition. Her mother is not affected by the condition.

What is the chance of the woman being affected by the condition?

- A 100%
- **B** 75%
- C 50%
- **D** 25%

6093/1/9/19

38. The diagram below shows the blood group phenotypes of some members of a family.

What are the blood group genotypes of the parents?

|   | father's genotype | mother's genotype |
|---|-------------------|-------------------|
| Α | B B               | IVIB              |
| В | IBIO              | IVIA              |
| С | B O               | IAIB              |
| D | IBIO              | IVIO              |

6093/1/19

[Turn over

39. The diagram shows some of the processes which take place during the carbon cycle.

Which labelled part of the cycle may involve bacteria and fungi?

**40.** The table shows the results of a field study of four species in a food chain in an area of woodland.

| species | number of individuals | biomass of one individual (arbitrary units) |
|---------|-----------------------|---|
| R       | 10,000                | 0.1   |
| s       | 5                     | 10.0  |
| Т       | 500                   | 0.002                                       |
| U       | 5                     | 300 000.0                                   |

What is the energy flow in the chain?

A R→T→S→U

**B**  $R \rightarrow T \rightarrow U \rightarrow S$ 

C  $U \rightarrow S \rightarrow R \rightarrow T$ 

 $D U \rightarrow R \rightarrow S \rightarrow T$

# BROADRICK SECONDARY SCHOOL SECONDARY 4 EXPRESS PRELIMINARY EXAMINATION 2019

**BIOLOGY** 

6093/02

Paper 2 Theory

Sep 2019

Candidates answer on the Question Paper No Additional Materials are required.

1 hour 45 minutes

### **READ THESE INSTRUCTIONS FIRST**

Write your name, index number and class on the work you hand in.
You may use an HB pencil for any diagrams, graphs, tables or rough working.
Write in dark blue or black pen.
Do not use staples, paper clips, glue or correction fluid.

## Section A

Answer all questions.

#### Section B

Answer all the questions. Question 9 is an Either/Or question.

Write your answers in the spaces provided on the Question Paper.

You are advised to spend no longer than one hour on Section A and no longer than 45 minutes on Section B.

Candidates are reminded that **all** quantitative answers should include appropriate units. The use of an approved scientific calculator is expected, where appropriate.

The number of marks is given in brackets [ ] at the end of each question or part question.

| For examin | ier's use |

## Section A (50 marks)

Answer all the questions in the space provided.

| 1 | (a) | Define the term translocation.  |  |
|---|-----|---|--|
|   |     |   |  |
|   |     |   |  |
|   |     |   |  |
|   |     |   |  |
|   | (b) | The figure below shows a scanning electron micrograph of a type of vascular tissue found in plants. |  |

Fig 1.1

6093/2/9/19

|   | (1)                                     | Name the vascular tissue.  | [1]      |
|---|---|--|----------|
|   | (ii)                                    | With reference to Fig. 1.1, describe two ways that these vascular tissues are adapted to their functions.                | e [2]    |
|   |   |  |          |
|   |   |  |          |
|   |   |  |          |
|   | (c)                                     | Some weedkillers stop the plant from photosynthesising. These are often applied to the soil where the weeds are growing. | n [4]    |
|   |   | Explain how the weedkiller reaches its site of action in the leaves.   |          |
|   |   |  |          |
|   |   | ,  |          |
|   |   |  |          |
|   |   |  |          |
|   |   |  |          |
|   |   |  |          |
|   |   |  |          |
|   |   |  |          |
|   |   | ŢŢ   | otal:9m] |
| 2 | (a)                                     | State what is meant by the term 'activation energy'.   | [1]      |
|   |   |  |          |
|   |   | ,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,   |          |

## (b) Fig 2.1 shows a section of photographic film.

The top layer is made of silver particles embedded in a layer of gelatine which is a type of protein.

Fig 2.1

In an investigation, a 20 mm length of photographic film was placed in each of three boiling tubes.

- The film was immersed in 20cm<sup>3</sup> water.
- 1 cm<sup>3</sup> of liquid at different pH values was added to the boiling tubes.
- 1 cm<sup>3</sup> of protease solution was added to each boiling tube.
- Each boiling tube was shaken gently to mix the contents.
- Each boiling tube was kept at 37°C for 1 hour.

Fig 2.2 shows the apparatus and the results of the investigation.

### Section B (30 marks)

Question 7 and 8 are compulsory questions. Question 9 is in the form of an **Either/Or** question. Only one part should be answered.

7 Germination is the process by which the plant grows from a seed. It results in the formation of a seedling. Germination of seeds requires both external and internal conditions such as temperature, water, light and air. Cells of germinating seeds were found to have high levels of enzymatic activity.

The experiment in Fig. 7.1 is used to measure the changes in the volume of gases confined inside a flask of seeds that are germinating.

Fig 7.1

At half hour intervals, the liquid level in tube X is measured on the scale.

6093/2/9/19

The result is recorded in Table 7.2.

Table 7.2

| time (h) | reading on scale that<br>shows liquid level in tube<br>X/ cm | volume changes of<br>gases in flask/<br>arbitrary units |
|----------|--|---|
| 0        | 2.3  | 0   |
| 0.5      | 3.1  | -0.8  |

| 9    | (a)  | -DNA molecule is a macromolecule that is made up of two polynucleotide [6 strands t(1m)wisted together to form a double helix structure. (1m)]  | 3]         |  |  |  |  |  |  |  |  |  |
|      |      | -A gene is a small segment of DNA (1m)which contains a specific sequence of 6093/2  |            |  |  |  |  |  |  |  |  |  |

#### nucleotides (1m)that controls the production of a polypeptide. [1]

-Chromosome is made of DNA and proteins(1m). It is condensed and coiled tightly (1m)

(b) Independent arrangement and assortment of homologous chromosomes [4] during metaphase I and anaphase I (1m)

Pairing and Crossing over of non sister chromatids of homologous chromosomes during Prophase 1 of meiosis to form new combinations of alleles.(1m)

Independent arrangement and assortment of chromatids during metaphase II and anaphase II(1m)

Random fertilization (fusion of gametes) leads to new combinations of zygotes(1m)

- Any 4 points

9 Or

9 a(i) A:vena cava B: pulmonary vein

[2]

- (ii) Prevent backflow of blood from left ventricle into left atrium, when the muscles [1] of the left ventricle contract.
- (iii) -deoxygenated blood returns from the body organs through the vena cava into [5] the right atrium.
  - as blood is returning, blood pressure within the right atrium increases.
  - -when pressure in right atrium is greater than right ventricle, tricuspid valve pushes open and blood flows into right ventricle
  - -muscles of right atrium contract and push blood into right ventricle
  - -muscles of right ventricle contract and push blood into pulmonary artery
  - -increase in pressure in right ventricle pushes the tricuspid valve closed

<u>Pressure in right ventricle is greater than pulmonary artery, This causes</u> semilunar valves to push open

6093/2

-Semilunar valves push open and blood leaves right ventricle to the lungs.

(max 5 points)
